                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESIDE 11
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       04474AA
```

The present sequence appears in the specification, which describes a tetracycline responsive expression vector (TKEV), which contains a sequence encoding a tusion protein comprising a transcriptional

```
transactivation domain (TID) operatively attached to a tetracycline repressor protein (TRP), the first sequence operatively positioned downstream of a promoter, the vector also contains a clound site operatively positioned downstream of a basal promoter comprising a tetracycline operator. The TREVS can be used to produce stable cell lines in which gene expression is tightly regulated by tetracycline. They can be used for the production of proteins such as tumour suppressor profeins which can be used to the production of proteins such as tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   27 GACCTGCCTCTCGCTCAGCCTTGAGTTTGAAGAACAGAAGAACATGATTTACTGCATTA 186

New method for increasing the prollierative capacity of cell lines comprises administration agents reversibly activating telumerase activity and reversibly increivating Rb/INK4 and/or p53 pathways useful in treating age related diseases.

Claim 5; Page 121 123; 123pp; English.

subsequently of use in pharmaceutical and cosmetic preparations used to treat conditions related to (premature) ageing, e.g. macular degeneration and attentosclerosis. The cells can also be used to replace tumour cell lines in vitro and the studies on biodemical and physiological aspects of growth and differentiation. Long lived (immortal) cells could also be used in the production of normal or genetically engineered e.g. the number of mitotic divisions, of a cell. The method relies on a divisition of a telementase activity and inhibition of one or both of a retinablastoma (Rb)/INK4 pathway of a p53 pathway. Phosphorylation of Rb by cyclin dependent Kinases, coff and coke, releases the cells into the division cycle. Binding of INK4 tamily members, e.g. the tumour suppressor plofikk4, inhibits kinase activity and results in growth arrest Rb inactivators can selectively and reversibly inactivate an Rb/LNK4 pathway, especially in RNY2 is a cellular inhibitor of Rb/E2F function and the p53 tumour suppressor The invention concerns methods and reagents for extending the lite-span, and can also be used in the methods. Other molecules which can be used include cake or cake amutants. In particular, a cake mutant is one which differs from at one or more of residues K22, R24, H95 and/or D97. Additional constructs include a papilloma virus E7 protein, or other p53. Antisense constructs of The methods are useful for viral oncoprotein which bypasses Rb and/or p53. Antiscuse consitie Rb and p151NK4a genes may also be used. The methods are us increasing the proliferative capacity of cells. The cells are biotechnology products.

Novel androgen receptor associated proteins used to detect androgenic or antiandroquaic activity in screening assays for candidate pharmaceutical molecules which promote or inhibit the activity

laim 8: Page 47 54; 59pp; English,

designated Rb. Androgen receptor co-activator proteins from the present invention can be used in streening assays to identify candidate pharmacentical molecules for the ability to promote or inhibit the interaction of androgen receptors and androgen responsive elements to modulate androgen receptors and androgen responsive elements to include androgenic activity. The identification and characterisation of anorogenic receptor co-activity as such as those of the invention will terilitate the development of screening assays to evaluate the potential The present sequence encodes a human androgen receptor coactivator efficacy of drugs in the treatment of prostate cancer.

Claim 1: SEQ ID 1210; 44pp; English.

adenoratrinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, the present invention describes a method (M1) for serecting for an anti-neoplastic agent. The method involves exposing cells to a chemical agent to be rested for anti-neoplastic activity, determining a change in expression of at least one que (I) of a signature gene set, where (I) comprises a sequence (S) selected from 8447 sequences (qiven in ABL51664 to ABL70110), or is at least 95% identical to (S), where a change in expression is indicative of anti-neoplastic activity. (1) has eyeostatic activity and can be used in one therapy. MI can be used for serecting and out in emphasic agent, and can be used for producing a product, which is the data collected with respect to the anti-neoplastic agent as a result of ML, and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the treatment of cancer such as colon, breast, stomech, bund, thyroid, wesophageal, ovarian, Figure 1. intilliating lobular cancer, squamous cell carcinoma, neuroendocrine carcinoma, papillary carcinoma and Wilm's tumour. 8×35666666666666666666666668×8×

                                                                                                                                                                            protein (RISP) of the invention. The proteins can be used for inhibiting eachilds profiler protein. The RISPs can be used for treation, when conditions treated with a p53 protein. The RISPs can be used for treating diseases characterised by abnormal cellular profiferation, particularly cancers. The RISPs have a broader spectrum of

```
protein (KISP) of the invention. The proteins can be used for inhibiting celular proliferation, when coadministered with a p54 protein. The KISPS can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The KISPs have a broader spectrum of activity than wild type KISPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Modified retinoblastoma fumour suppressor; RTSP protein; cancer therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      5
```

```
This sequence encodes a modified retinoblastoma tumour suppressor protein (RTRP) of the invertion. The protein can be used for inhibiting cellular proliferation, when coadministered with a psy protein. The RTSPs can be used for treating diseases characterised by abnormal cellular.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       proliferation, particularly cancers. The RISPs have a broader spectrum of

```
This sequence encodes a modified retinoblastoma tumour suppressor protein (RTSP) of the invention. The proteins can be used for inhibiting cellular proliferation, when coadministered with a p54 protein. The RTSPs can be used tor treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RTSPs have a broader spectrum of activity than wild type RTSPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        90 TCCTGAGGTCGACCTAGATGAGATGTCGTTCATTTTTACTGAGGTAGAGAAAAAATATAGA 149

                                 protein (RTSP) of the invention, the proteins can be used to inhibiting cellular proliferation, when coadministered with a p54 protein. The RISPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RISPs have a broader spectrum of activity than wild type RTSPs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            6.58

The proteins can be used for inhibiting cellular proliferation, when coadministered with a p53 protein. The RISPs can be used for freating discusses characterised by abnormal cellular proliferation, particularly cancers. The RISPs have a broader spectrum of

The proteins can be used for inhibiting calbular proliferation, when coadministered with a p54 protein. The PTSPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RTSPs have a broader spectrum of activity than wild type RISPs.
Modified retinoblastoma fumour suppressor; RISP protein; cancer therapy;

hEST2: Lelomorase; catalytic subunit; reverse transcriptase; life-span; retinoblastoma; p53; tumour suppressor; inhibitor; arteriosclerosis; proliferation, immortal, tumour therapy; macular degeneration; activator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention concerns methods and reagents for extending the life-span, a gill the number of miteria divisions, of a cell. The method relies on activation of a telomerase activity and inhibition of one or both of a refinehlastems (PP)/TIMA palhway or a p53 palhway Phospherylation of Rb by cyclin-dependent kinases, cdk4 and cdk6, releases the cells into the division cycle. Binding of iNK4 family members, e.g. the tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            comprises administering agents reversibly activating telemerase activity and reversibly inactivating RECTARA and/or p53 pathways weeful

suppressor plankeds, inhibits kinase activity and results in growth an arrist. But hactivates an selectively and recensibly hactivate and the CNM4 pathway repertings as selectively and recensibly hactivation and the pS3 tumour suppressor is a cellular inhibitor of Rb/R2F function and the pS3 tumour suppressor and ear also be used in the methods, other molecules which can be used in include odds or odds mutatis. In particular, a cdk4 mutant is one which additional constructs include a papilloma virus B7 protein, or other viral ouroproblem which bypasses Rb and/or pS3. Antisense constructs of the Rb and planked actual bypasses Rb and/or pS3. Antisense constructs of increasing the proliferative expantly of cells. The cells are useful for increasing the proliferative expantited and cosmictly preparations used to treat conditions related to (premature) against e.g. macular degeneration and afteriorsis. The cells are useful for and arterioselerosis. The cells and physicological aspects of these in vitro and for studies on biochemical and physicological aspects of use in the production of normal or quentically engineered.

The present sequence encodes a human androgen receptor coactivator designated Rb. Androgen receptor co-activator proteins from the present invention can be used in screening assays to identify condidate pharmaceutical molecules for the ability to promote or inhibit the interaction of androgen receptors and androgen responsive elements to modulate androgen activity. The identification and characterisation of androgen co-activity such as those of the invention will

adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, infiltrating lobular cancer, squamous cell carcinoma, neuroendoczine carcinoma, papillary carcinoma and Wilm's tumour. anti neoplastic agent. The method involves exposing cells to a chanical agent to be rested for anti neoplastic activity, determining a change in expression of at least one gene (1) of a signature gene set, where (1) compises a sequence (8) selected from 844 Sequences (given in ABL51664 to ABL70110), or is at least 95% identical to (8), where a change in expression is indicative of anti-neoplastic activity. (1) has extostatic activity of and can be used for producing a product which is the data collected with respect to the anti-neoplastic agent as a structure and the data is sufficient to convey the chemical structure and/or properties of the agent. MI can be used in the trendical structure and/or properties of the agent. MI can be used in the trendical The present invention describes a method (MI) for screening for an oesophageal, ovarian, kidney, prostate or pancreatic cancer,

This gene curedes a protein, the absence of which is associated with a needbash. It is used to produce an antibody to the protein, contacting this with the tumour sample and detecting immune complexes as indication of the presence in the tumour sample of the protein. Whole sequence or a unique sub-region can be used. The method identifies patients lacking the detective retinoblastoma (RD) allele and thus are not at risk of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     3
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ÷

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  chromosome 13 lambda phage library, was used in a chromosome walk in solute and map 30 kb of genomic DNA surrounding the HT-8 sequence. Fragment P7H30.78 (ATC 97500) was obtained, and was used as a probe to screen a cDNA library that had been constructed from an adenovirus 12-transformed human embryonic retinal celline. This provided clone p4.78 (ATC 9738), which in Northern blots cross-reacted with a 4.7 kb transcript, in transformed retinal cells which was not present in 4 retinoblastoma and one osteosarcoma cell samples. Rb nucleic acids compitaing the Rb genc, cDNA or a fragment of the genc, such as one of the 27 excus or 26 introns, can be used in a claimed method for detecting a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    retinoblastoma gene Rb. Absence or mutation of the Rb gene (see also AAX04502) predisposes an individual to retinoblastoma. To isolate Rb cDNA, the human DNA probe pH3-8, isolated from a human

protein (KTSF) of the invention. The proteins can be used for inhibiting cellular proliferation, when coadministered with a p53 protein. The RTSPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cannots. The RTSPs baye a broader spectrum of activity than wild type RTSPs. This Sequence encodes a modified retinoblastoma tumour suppressor

```
This sequence encodes a modified retinoblastoma tamour suppressor protein (RTSP) of the invention. The proteins can be used for inhibiting callular proliferation, when coadministered with a p53 protein. The RTSPs can be used for treating diseases characterised by abnormal cellular prollleration, particularly can eefs. The RTSPs have a broader spectrum of activity than wild type RTSPs.
                                                                                                                                                                                                                                                                                                                                                                                                 Modified retinoblastoma tumour suppressor; RISP protein; cancer therapy;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This sequence encodes a modified retinobiastoma tumour suppressor protein (RTSP) of the invention. The proteins can be used for inhibiting callular proliferation, when coadministered with a p55 protein. The RISPs can be used for treating diseases characterised by abnormal cellular proliferation, particularly cancers. The RTSPs have a broader spectrum of activity than wild type RTSPs.
